

Here is the picture of the Week 2 train wreck. The visiting team expected and observed logits are plotted; we could plot the home team logits but it would show the same results with the signs reversed. In a perfect world, all the dots in either the home or away version would be on the blue diagonal line. Teams in the upper right quadrant were predicted to win and did win. Teams in the lower left were losers on both fronts. The upper left are predicted losers who won; the lower right, predicted winners who lost. The further the dot from the diagonal the greater my surprise and disappointment. The Patriots in particular stand out with a predicted logit versus the Vikings of -1.5 and observed of +1.5.
